## Dfs Traversal

### Program:

```
def dfs(graph, start, visited=None):
    if visited is None:
        visited = set()
    visited.add(start)
    print(start, end=" ")
    for neighbor in graph[start]:
        if neighbor not in visited:
            dfs(graph, neighbor, visited)

graph = {
    'A': ['B', 'C'],
    'B': ['D', 'E'],
    'C': ['F'],
    'D': [],
    'E': ['F'],
    'F': ['A']
}
print("DFS traversal from node B:")
dfs(graph, 'B')
```

### Output:

DFS traversal from node B:  
B D E F A C
